

PERSON OF THE CENTURY

TIME

ALBERT
EINSTEIN

“The most beautiful thing we can experience is the mysterious. It is the source of all true art and all science. Those to whom this emotion is a stranger, who can no longer pause to wonder and stand rapt in awe, are as good as dead: their eyes are closed.”

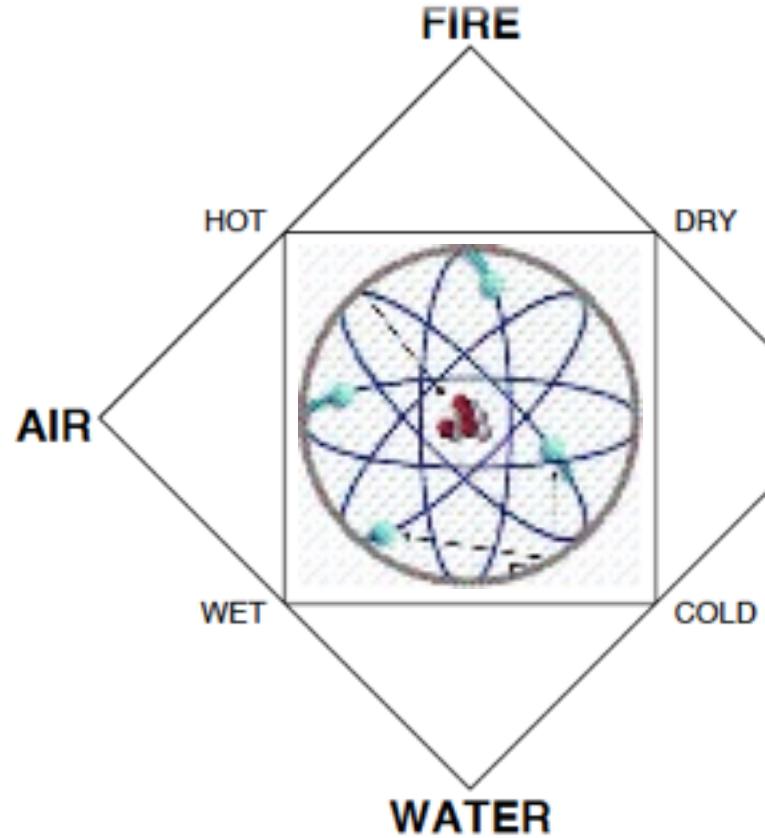

Albert Einstein

www.cita.utoronto.ca/~bond/traj/talks/bond_rci_public_09_11_01.pdf

the Weighty Matter of the Cosmos: what is the Universe made of?

4 elements/ 4 qualities

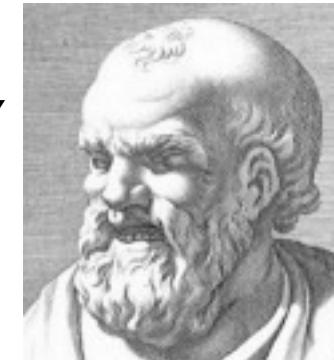

+ 5th element: *quintessence* aether

Leucippus, Big Cosmology & Democritus, Little Cosmology
460-370BC 2 elements: **atoms** & the **void**: eternal U, matter conserved

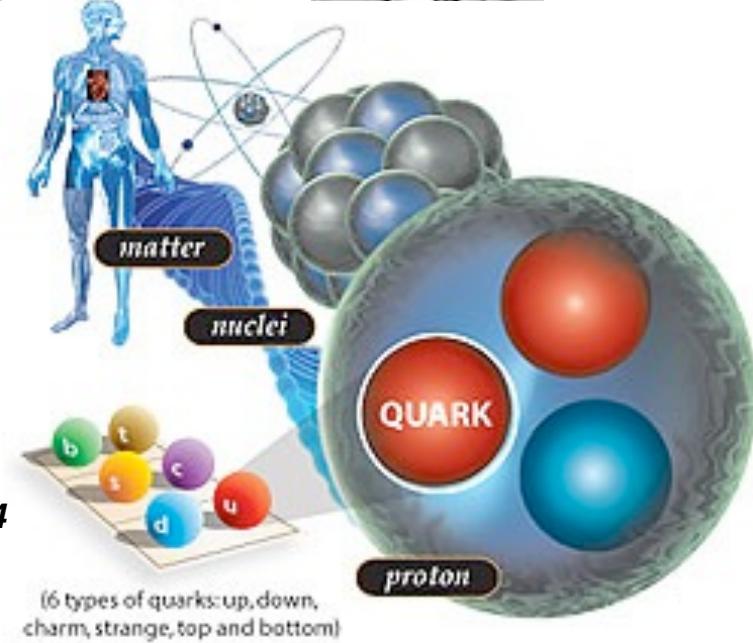

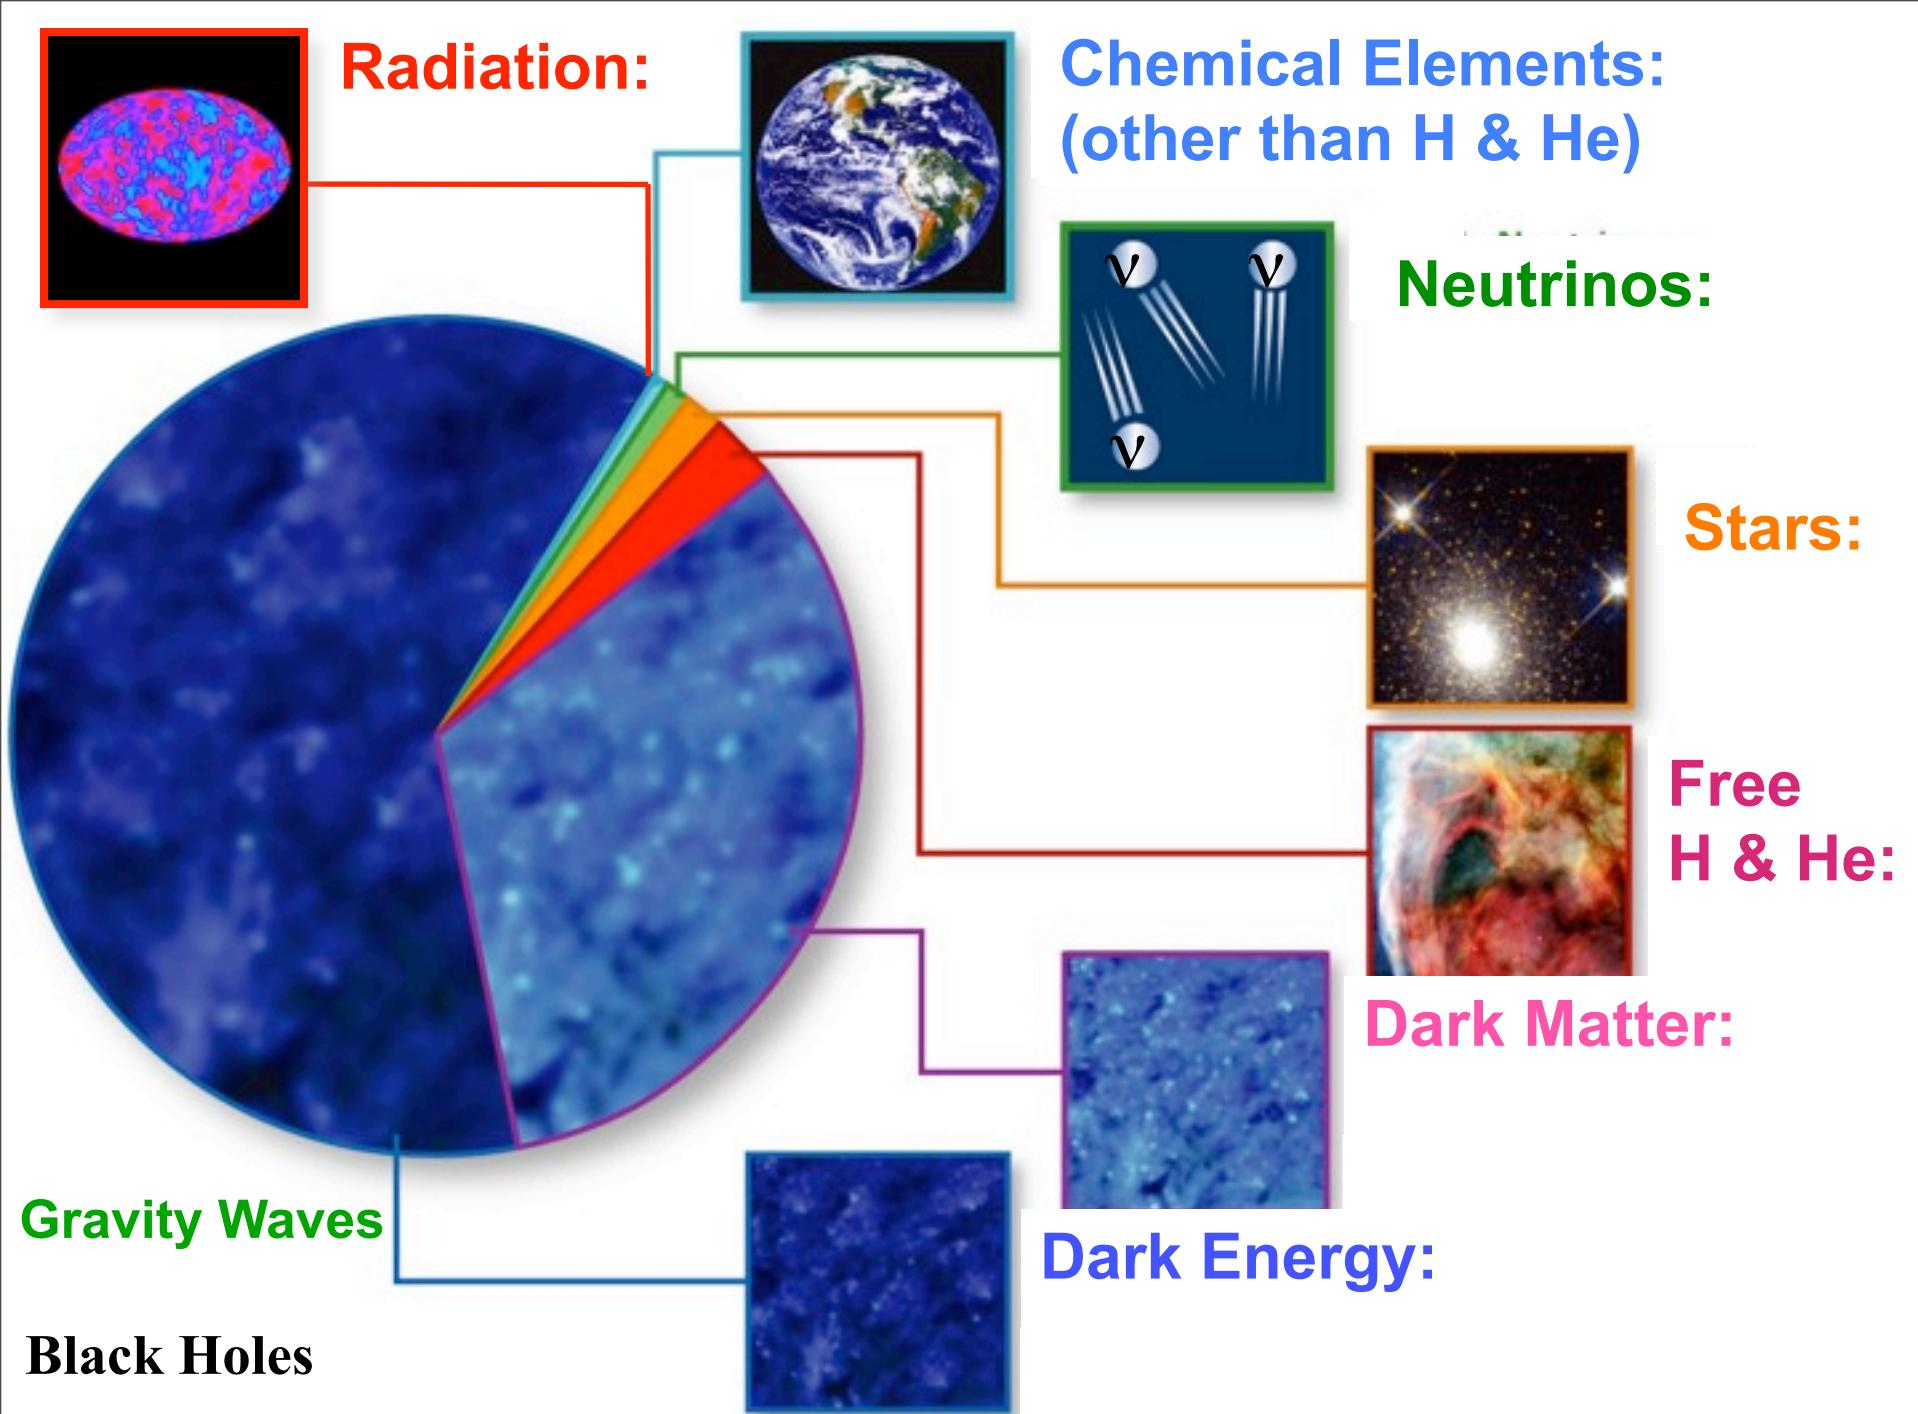

Dalton
1766
-1844

Rutherford
1911 nucleus +electrons

water (Thales), air (Anaximenes), earth (Xenophanes), and fire (Heraclitus). Empedocles unified theory of all 4. Plato 4 of 5 geometrical crystal-like solids as atoms. Aristotle prevailed: elements as combinations of qualities

NEW LAW OF GRAVITATION (1916); speed of light is the ultimate speed **HORIZONS**; Space is curved by mass; Light bends, wavelengths change, under gravity

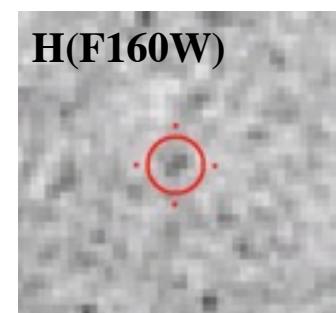

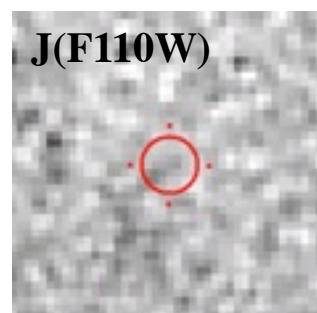

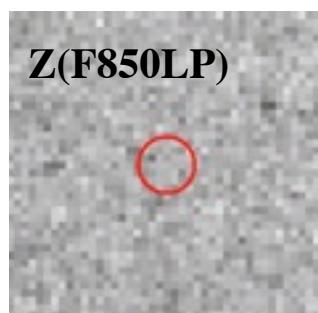

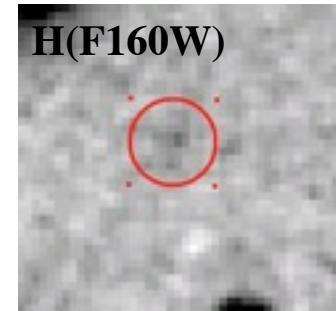

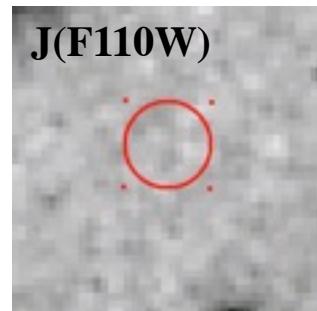

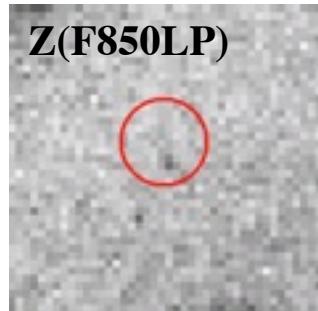

DAVE BARRY

Over the years I have been harshly critical of the scientific community for wasting time researching things nobody cares about, such as the universe. I don't know about you, but I'm tired of reading newspaper stories like this:

"Using a giant telescope, astronomers at the prestigious Crudwinkle Observatory have observed a teensy light smudge that they say is a humongous galaxy cluster 17 jillion light years away, which would make it the farthest-away thing that astronomers have discovered this week. However, astronomers at the rival Fendleman Observatory charged that what the Crudwinkle scientists discovered is actually mayonnaise on the lens. Both groups of astronomers say they plan to use these new findings to obtain even larger telescopes."

ρ_Λ (time,space) ?

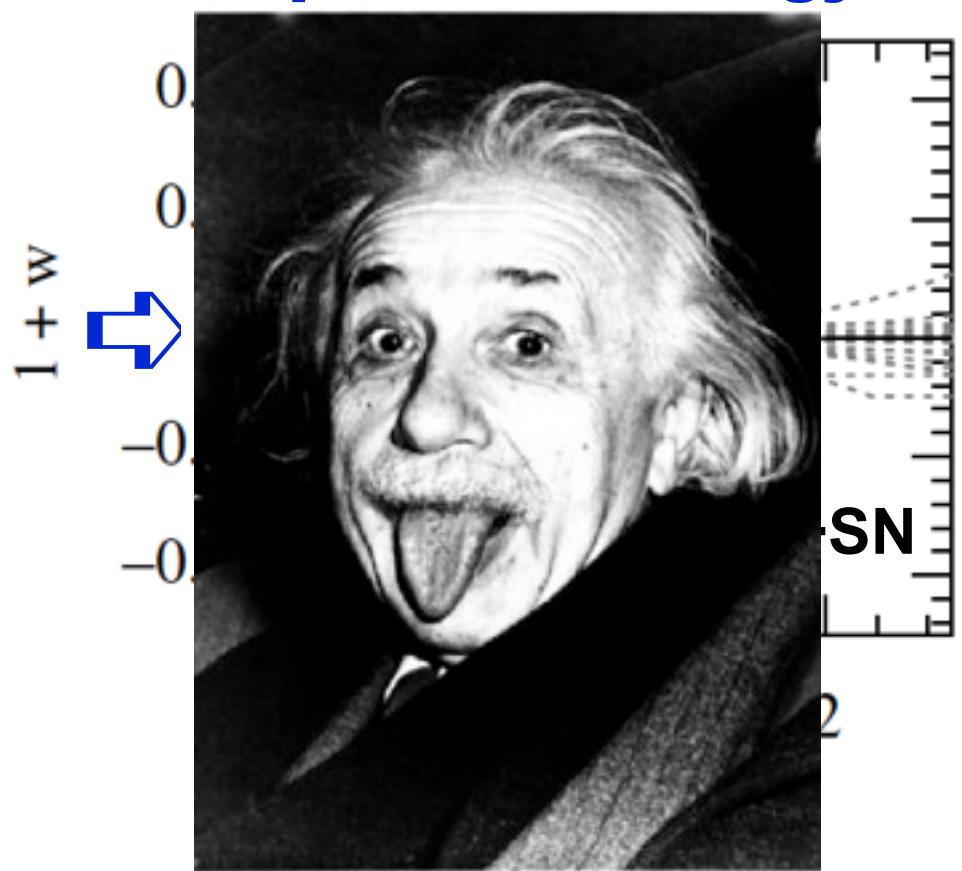

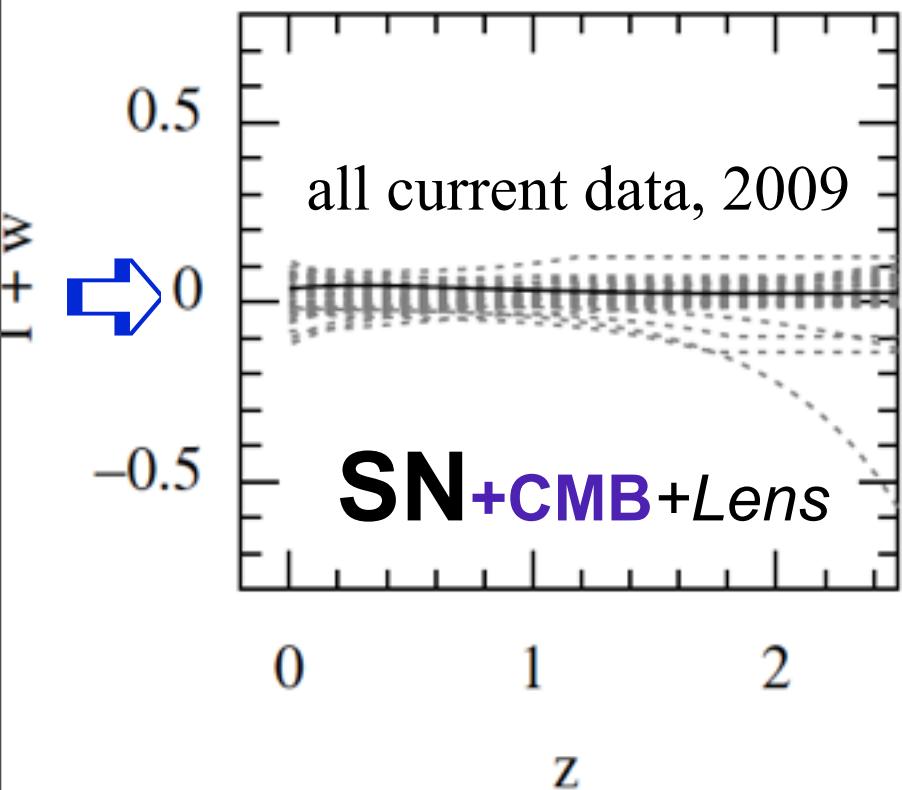

is the dark energy “vacuum potential energy” ?

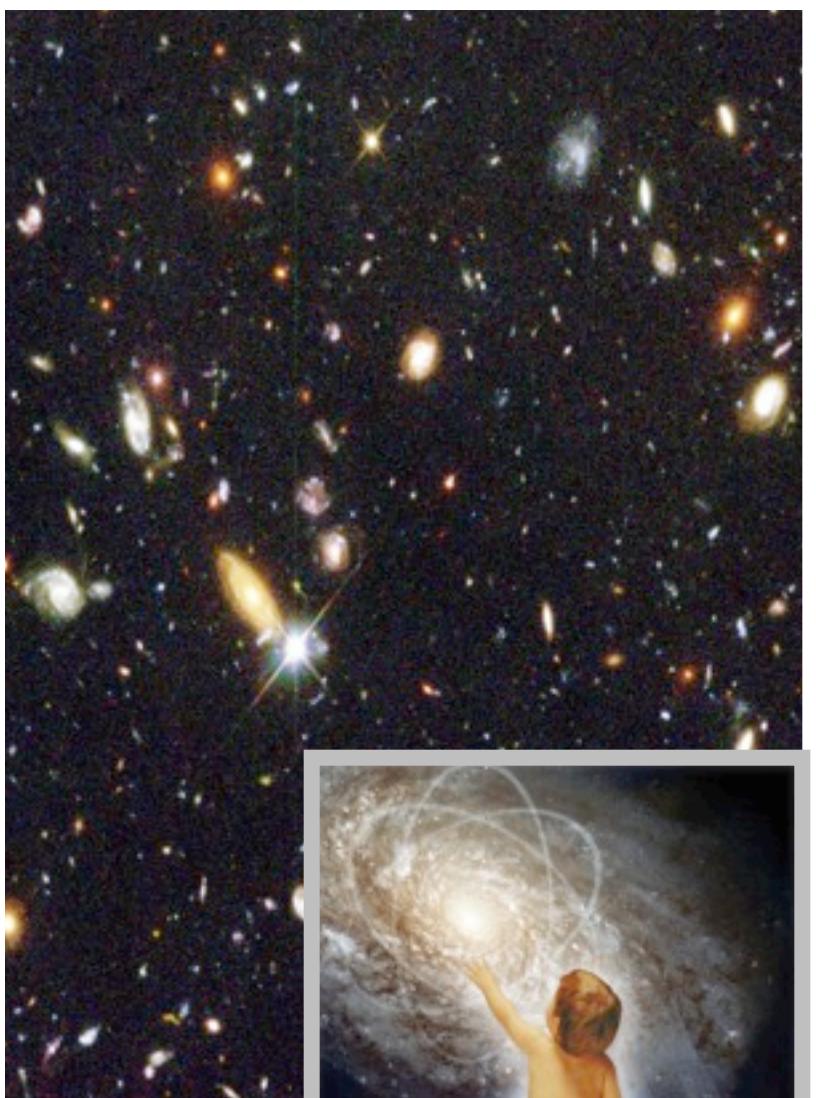

TEST: within errors, energy-density does not change with
expansion \Rightarrow Einstein's cosmological constant is best fit so far

ρ_Λ (time,space) ?

is the dark energy “vacuum potential energy” ?

TEST: within errors, energy-density does not change with
expansion \Rightarrow Einstein's cosmological constant is best fit so far

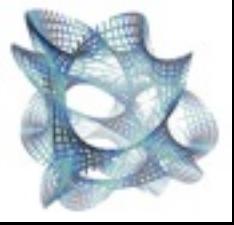

**“To me every hour of the light
and dark is a miracle. Every
cubic inch of space is a miracle.”**

– Walt Whitman

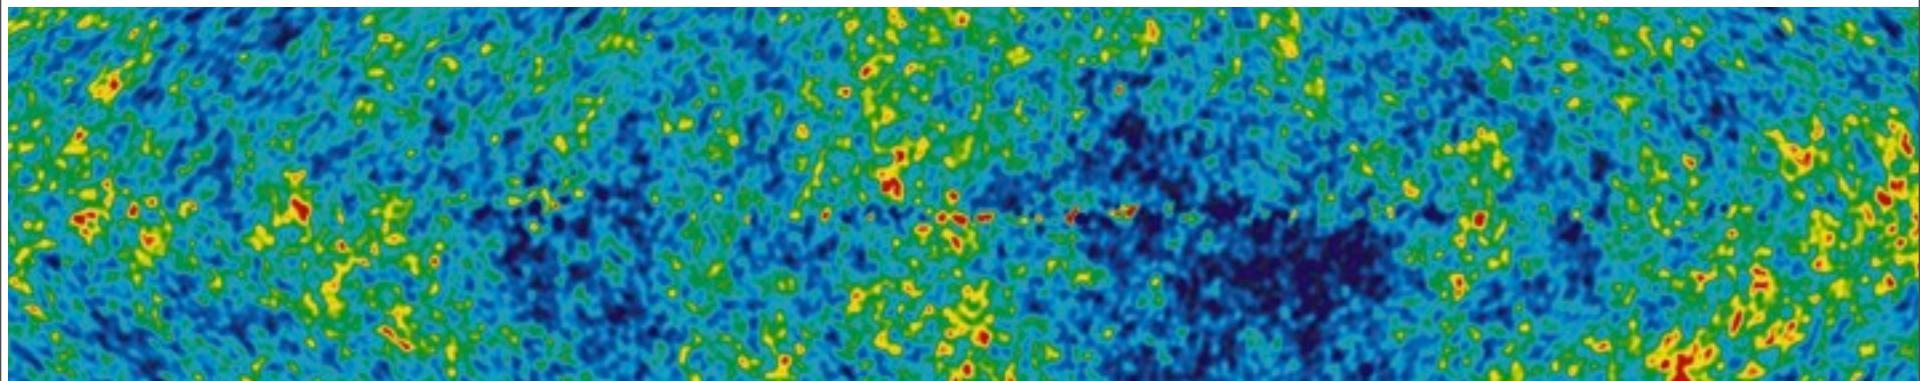

In every cubic centimetre

- cosmic radiation 412 cm^{-3}
- dark matter $\sim \text{amu m}^{-3} \sim$
compressed in MW to $\sim 0.1 \text{ amu cm}^{-3}$ for
LHC-type DM, ~ 1 every 10 cm
- dark energy $\sim 4 \text{ keV cm}^{-3} \sim$
 $(\text{milli-eV})^4$
- neutrinos $\sim \text{CMB photons}$
- gravity waves
- virtual particles - vacuum fluctuations
- Higgs potential - origin of mass
- extra dimensions here, now?

end

Mapping the Birth of the Universe with ACT and SciNet

ACT@5170m

why Atacama? driest desert in the world. thus: cbi, toco, apex, asti, act, alma, quiet, clover

CBI2@5040m

We shall not cease from exploration
And the end of all our exploring
Will be to arrive where we started
And know the place for the first time.

– T. S. Eliot

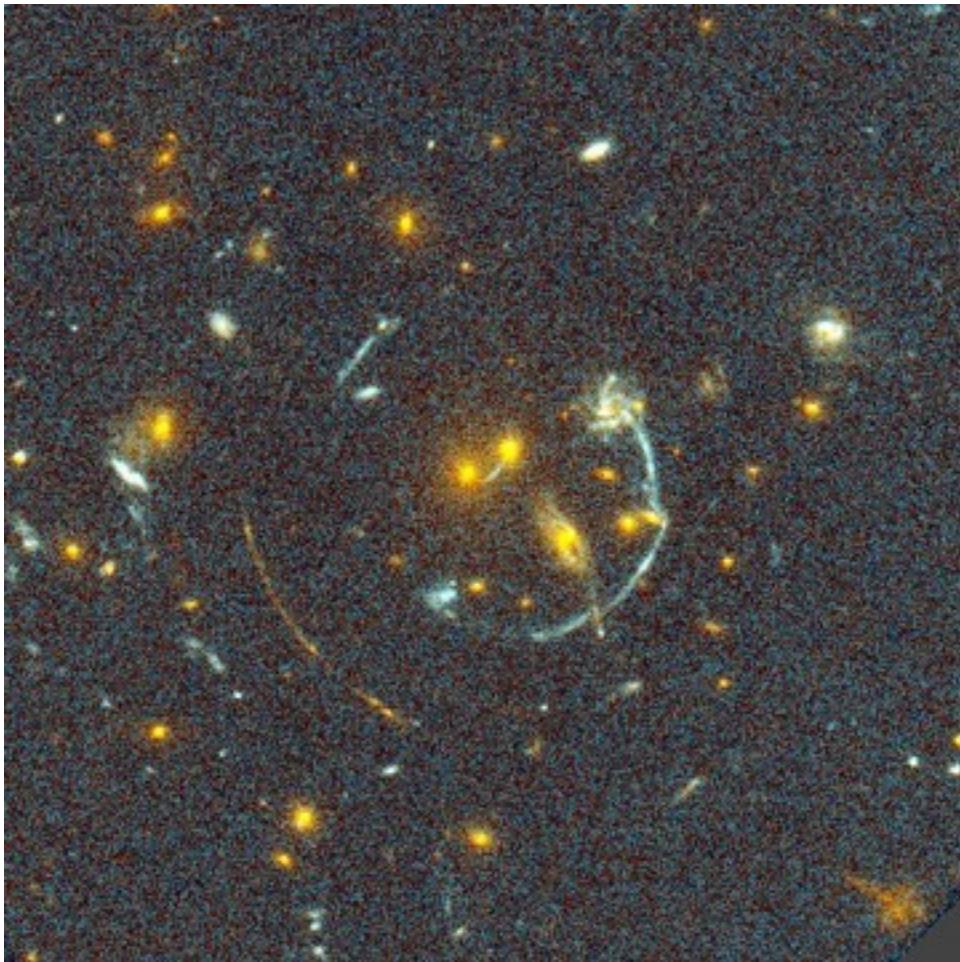

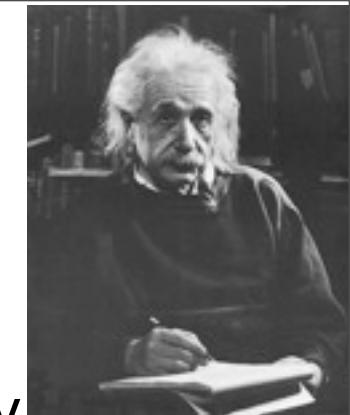

it is primarily for this knowing & its inspiration to young minds that the world is spending tens of billions of dollars on the cosmic quest for fundamental physics

The world wide web, technological space spinoffs, amazing detector & computational advances, are (important) asides

EINSTEIN ... 1905 international year of physics 2005

- ✓ NEW LAW OF GRAVITATION (1916)
- ✓ speed of light is the ultimate speed (**HORIZONs**)
- ✓ Space is curved by mass
- ✓ Lightwaves bend, wavelengths change, under gravity
