## Canadian astronomers reveal surprising new portrait of the Early Universe

### Planck space mission sheds light on the Universe's age, evolution and composition

**Longueuil, Quebec, March 21, 2013** – The Planck Space Telescope has produced by far the best map ever made of the most ancient light in the Universe, showing that it is slightly older than previously thought, expanding more slowly and that there is more matter than known before.

**The most ancient light in the Universe**
